

ASCENDI GROUP MANAGES GEOGRAPHIC DATA USING WEB PORTAL

IDENTIFYING GOALS

Ascendi Group manages a network of 3,000 km of transport infrastructure concessions, generally including responsibility for design, construction, funding, operation, and maintenance. Additionally, Ascendi developed special skills in toll collection services, acting today as one of the world-leading private companies in toll collection by multi-lane free flow schemes. In Portugal, Ascendi Group is a leading player in road construction and maintenance, and has decisively contributed to the improvement and modernization of the country's road network. With a large transportation network managed directly by Ascendi, the company had a huge amount of data it needed to store and manage, such as drawings, bulletins, and reports.

“ This system attributes a classification to our maintenance status, which helps us better account for the level of maintenance and/or repairs to our infrastructure in our yearly budgets.
